TECHNICAL DATA SHEET

Description

ALGASOIL is a fertilizer made from seaweed extract and recommended for use in all types of crops. ALGASOIL increases the cation exchange capacity and nutrient retention.

ALGASOIL establishes a favorable environment for the development of beneficial microorganisms. ALGASOIL promotes root development thanks to the complementary action of the algae extract components. In this way, the development of the roots is promoted in a balanced and more resistant way to face stress situations in crops in different types of soil. In addition, it is suitable for organic agriculture.

Composition

Substance Name	% Content
Total Nitrogen	2%
Ammoniacal Nitrogen	0,1%
Water Soluble Nitrogen	1,4%
Water Insoluble Nitrogen	0,5%
Total Phosphorus (P2O5)	2%
Available Phosphorus (P2O5)	2%

03

Funtions

- Stimulates nutrition, increasing root activity and water and nutrient absorption.
- Improves water and fertilizer retention and utilization.
- Promotes tolerance to biotic and/or abiotic stress situations.
- Enhances crop production and productivity.
- Promotes healthy growth and uniform vegetative development.

Soluble Potassium (K2O)	1%
Magnesium (Mg)	0,92%
Water Soluble Magnesium (Mg)	0,16%
Sulfur (S)	4,70%
Combined Sulfur	4,70%
Calcium (Ca)	7,74%
Iron (Fe)	0,96%

04

Mode of use

-Before planting: From 31.5 to 81 kilograms per acre.

-After planting: Use a mixture of 1 44 lb. bag of ALGASOIL for every 176 lb. of common fertilizer.

For additional application tips visit our website.

05

Submissions

44 lb

**06**

Storage

Keep away of children. Keep away from foodstuffs, beverages and feed. Keep in a cool, dry place at temperatures below 95°F.

**07**

Compatibility

Algasoil is compatible with most granular fertilizers.

If chemical interaction is unknown, a "jar" compatibility test is recommended..
